RE: Ashbrook Townhomes

SPECIAL NOTE ON FUNDING RESERVES

In an effort to provide the best and most useful information to the board, our reserve study software offers customizable funding plans. That means if the board has a different funding plan in mind than the one we recommend, we can produce that plan.

There are many approaches to funding reserves but it is recommended that Full (100%) Funding be pursued because it is most likely to avoid special assessments and it shares costs fairly among all members along the 30-year time line. Due to fluctuating inflation rates, investment rates, component costs, starting balances and useful life adjustments, the Percent Funded level will fluctuate (sometimes dramatically) from year to year. The Funding Plan takes these factors into consideration, make adjustment to the Annual Contribution and charts a new course toward Full (100%) Funding.

Type of Reserve Study Performed

A Level III Reserve Study Update with No Site Inspection was performed for this report.

Reserve Account Starting Balance

Effective the start of the 2024 fiscal year, based on information provided by client, the Projected Starting Reserve Balance is **\$149,640** versus the Fully Funded/Ideal Starting Balance is **\$290,173**.

Percent Funded

This homeowner association is currently **52% Funded** (Actual Starting Balance divided by Ideal Starting Balance.) 0-35%=Weak; 36-70%=Fair; 71-100%=Strong

Recommended Funding Plan Summary

A contribution of \$26,450 is recommended for the 2024 Fiscal Year (See funding plan for future year recommendations). Following this Recommended Funding Plan will adjust the level of reserves to 100% funded in 29 years, then maintain 100% funded moving forward.

REGENESIS A RESERVES

Reserve Study Consultants Oregon | Washington

Interest Yield on Reserves

A **0.25% Yield** is projected based on the current rate of return on your invested reserves. One of the benefits of the reserve study is it provides information needed to improve reserves investment returns. Investing reserves in CDs of differing maturities like 1 year, 3 year and 5 year based on when liquid funds will be needed will improve the average yield. A 1.5% average yield is achievable in the current market. If this rate was used in the projections, **\$95,226** in Interest Income would result over the 30 year projection period versus **\$15,871** produced by the current yield. Bottom Line: Increased Interest Income will lower owner contributions.

Inflation Rate

2.50% inflation rate was used based on the most recent 15-year average published by **www.inflationdata.com**

Tax Rate. 30% was used based on using Federal Tax Form 1120H versus 1120 which carries a 15% tax rate. Form 1120 is more complicated than 1120H, requirements are more stringent and tax preparers charge more to complete it. However, if interest earnings are high enough, the additional preparation cost can be worth it. See your CPA for more information on tax filing options.

Maintenance Plan

The proper care and maintenance of common components have been entrusted to the homeowner association. The goal of the Maintenance Plan is to provide general information and direction on how to maintain those components to produce the highest livability for the members. While specific items are included, the plan is not exhaustive and some issues may develop over time which should be added to the Plan. Recommendations relating to the Reserve Study are found in the Worksheet Notes; those related to annual maintenance are found in a Maintenance Plan found at the end of this report.

Annual Review & Update Service. An annual review and update of the Reserve Study is required by statute and necessary for continued accuracy. A review and update provides a new 30-year projection with current inflation factor, investment rates and any known component cost changes. Delivered with this report is a Three Year Price Guarantee Proposal that will save considerable money.

REGENESIS RESERVES

Reserve Study Consultants Oregon | Washington

It's been my pleasure to provide this valuable financial and maintenance planning information. I can be available by teleconference, for up to one hour, to review this reserve study, answer questions and make revisions that are indicated. Tuesday, Wednesday or Thursday are generally my best available days. Please contact me to arrange a meeting. Michael Stewart Ssional

2024 Reserve Study

Ashbrook Townhomes

Portland, OR

Prepared By:

Regenesis Reserves

Date:

August 9, 2023

Reserve Study Table of Contents

METHODOLOGY

Explains the purpose of the reserve study, how the information was gathered and the sources used.

LIMITATIONS & ASSUMPTIONS

Explains what a Reserve Study does and does not do.

WORKSHEET REPORT

Alphabetical listing of the reserve components by type, cost, year put in service, useful life and replacement year

FUNDING PLAN SUMMARY REPORT

- Percent Funded: Starting Balance divided by the Ideal Balance
- Ideal Balance: Each component is measured, assessed for useful and remaining useful life plus cost of repair or replacement. Based on this analysis, each component should have a certain amount of money set aside as of the year in question. The Ideal Balance is the sum of all these component amounts as adjusted by the inflation factor.
- Starting Balance: Reserve funds total at beginning of each fiscal year
- Annual Contribution: Funds needed to meet the reserve schedule
- Interest Income: Yield on invested reserve funds
- Tax Liability: Federal taxes owed on investment interest earned

ANNUAL EXPENDITURES REPORT

Chronological repair and replacement schedule

STARTING BALANCE FUNDS DISTRIBUTION

Allocates available funds to the components. If funds are insufficient to fully fund each component, funds are allocated to components that are scheduled to happen sooner.

Reserve Study Methodology

DEFINITION

Reserve Study Identifies the components which will require maintenance, repair or replacement in more than one and less than thirty years and the cost of repair or replacement of each at recommended intervals. Site inspections are based on visual observation and no invasive testing was done. Representative sampling is used where visual inspection is not possible.

RESERVE STUDY CRITERIA

- 1. Identify current reserve funds balance
- 2. Identify components to be included
- 3. Establish reasonable useful life of each component
- 4. Establish remaining useful life of each component
- 5. Estimate current replacement or repair cost of each component
- 6. Assemble data in Reserve Study
- 7. Generate Reserve Funding Plan.

FUNDING PLAN CRITERIA

The Funding Plan is based on the Cashflow Method and includes Percent Funded, Inflation Adjusted Ideal Balance, Starting Balance, Annual Contribution, Interest Income, Tax Liability and Inflation Adjusted Expenditures. Inflation is based on the most recent 15-year average as determined by www.inflationdata.com

SOURCES OF INFORMATION (as applicable):

Original plans and specifications

Original builders and developers

Contractors and vendors

Industry Professionals (engineers, architects, construction managers, etc.)

Board Members

General Members

Property Manager

Resident Manager

Cost Estimating Services

To remain accurate, the Reserve Study must be updated annually

Reserve Study Limitations & Assumptions

- 1. The Reserve Study is intended for the sole use of the Client and is not to be construed as a guarantee, warranty or an opinion on the advisability of purchase.
- 2. The information provided by the Reserve Study is effective for one year from the completion date of the report. An annual review and update of this Reserve Study is required to adjust known cost changes and to maintain accuracy.
- 3. Consultant's financial liability for errors and omissions is limited to the charge made to Client to perform the Reserve Study.
- 4. The scope of the Reserve Study is expressly limited to the components included.
- 5. The useful life estimates of the Reserve Study assume normal weather conditions and do not factor in damage by flood, wind, storm, earthquake or other insurable events. The useful life estimates assume proper construction, installation, design and regular and adequate preventive maintenance. Improper construction, installation, design or failure to maintain will lead to shortened useful lives.
- 6. The cost estimates of the Reserve Study are based in current pricing for similar installations and materials and/or based in actual costs paid by Client. Future costs are subject to change according to supply and demand, material costs, effects of inflation and other factors which are not under Consultant's control.
- 7. The conclusions of the Reserve Study do not involve invasive testing of the components and were arrived at by either visual inspection and/or information provided by Client.
- 8. The Reserve Study is not intended to address or discover construction defects, asbestos, mold, water intrusion or lead paint. Client agrees to indemnify, defend and hold Consultant harmless from all related claims.

Item Description	# of Items	Unit		Current Item Cost		Future placement Cost	Year Built	Useful Life	Year Replace	Life Left	One Time?

Electrical & Plumbing-Systems	1	Total	ς	_	\$	_	2006	60	2066	43	Yes

Comments: It is assumed that the electrical and plumbing systems have been installed in accordance with local building codes/standards. There have been no reports of large scale repair/failure occurring or anticipated.

Repairs and replacements of individual components of these systems are completed as needed and paid from Operating Budget. Widespread failure of these systems is uncommon and global replacement is generally not warranted. If it is determined, upon inspection by a professional, that a new system, or major repair/replacement is warranted, the cost and remaining useful life should be added per contractor recommendation.

Retaining Wall-Wood	265	Ln.Ft.	\$	12.00	\$	3,425	2006	20	2026	3	No

Comments: Height varies from 1 to 3 ft (north to south).

Wood retaining wall located along the north end of the back lot. It is recommended that when this requires replacement the board consider replacement with a superior construction type such as block wall. The current design relies on pressure treated wood to hold back grade and support fence. It is anticipated that this system will fail within 20 years due to dry rot (direct contact of wood with soil) and/or pressure from adjacent soil. The budget cost reflected here assumes replacement with "like" material/system. If a block wall system is to be employed the cost here should be adjusted accordingly.

Maintenance Plan for

Ashbrook Townhomes

The proper care and maintenance of substantial assets have been entrusted to the homeowner association. The key to any effective Maintenance Plan is consistency and expertise. The goal of this Maintenance Plan is to provide general information and direction on how to maintain those assets to produce the highest livability and market values for member units. While many specific items are included, the list is not exhaustive and some issues may develop over time which should be added to the Plan.

Many building and grounds components require specific maintenance to ensure their proper function. Many of the tasks are suitable only to trained professionals with a thorough understanding of the systems. It is highly recommended that only licensed, bonded and insured workman with the training, knowledge, tools and equipment to handle the maintenance of those systems or components be used to ensure highest service quality.

Annual Maintenance

The following tasks should be performed on according to a regular and adequate schedule as preventive maintenance:

Caulking Repairs

VERY IMPORTANT A knowledgeable contractor should inspect the buildings for sources of potential water intrusion, like missing flashing, failed caulking or negative drainage which directs water toward the building. Take appropriate corrective action as indicated.

General Repairs

The Operating Budget should provide money to handle various minor repairs like paint touchup, re-caulking, minor electrical, plumbing and roof repairs. Various non-emergency repair requests should be grouped together so work can be handled cost effectively.

Hot Water Heater Maintenance

The hot water heater should be inspected and repaired annually by a qualified boiler repair contractor to ensure proper and safe function.

Landscape-Maintenance

Landscaping is an extremely important aspect of livability and market value. Having a contractor that is competent and regularly attending to the landscaping is the proper approach. When the contractor completes work, a job slip should be left with a designated Committee member so the work can be reviewed. If there are deficiencies, the contractor should be notified immediately. If the contractor is consistently unresponsive or the quality of work deficient, a change in contractors is indicated. For details on landscape maintenance, refer to the landscape contractor's agreement.

Lights-Exterior

For appearance and security, all exterior light fixtures should be in good working order. Inspect and repair fixtures or replace bulbs as needed.

Pressure Washing

Each year, selected areas of asphalt and concrete sidewalks and steps should be pressure washed to remove oil spots, algae and moss which could cause slipping hazards.

Scuppers, Gutters & Downspouts

Gutters and downspouts should be inspected regularly, kept clear of debris, and repaired as needed.

Roof Maintenance

To ensure the roof lasts its normal useful life, the roof must be kept clean of debris, moss and algae. Each year, a qualified roof maintenance contractor should inspect, clean and repair the roof as needed.

Siding & Trim

All siding and trim should be inspected, repaired and caulked as necessary at least once per year, generally before winter rains come to ensure it is watertight.

Water Intrusion Repairs

A knowledgeable contractor should inspect the buildings for sources of potential water intrusion, like missing flashing, failed caulking or negative drainage which directs water toward the building. Take appropriate corrective action as indicated.
